Rovo Connectors

Connect data with
minimal effort

Atlassian's Teamwork Graph unifies data across apps, work and teams

By connecting with Atlassian products and key third-party apps (Slack, Microsoft, Google, Figma etc) to surface the right information for your teams in one unified platform, reducing context switching.

ANNOUNCING

Code Intelligence in Rovo

atlassian.com/code-intelligence

Tell me what modifications have been made to the codebase in the last 7 days, specifically focusing on frontend UI field changes, including added, removed, renamed, or updated fields and related interface adjustments.

Rovo is thinking... ▼

Analyzing...

- The user wants to know about codebase modifications in the last 7 days, specifically focusing on frontend UI field changes. This includes added, removed, renamed, or updated fields and related interface adjustments.

I need to look at recent commits and pull requests across their repositories. Let me use BitbucketAgent and also check GitHub for any recent changes.

Let me start by searching for recent code changes across their repositories.

Searching Bitbucket
Executing tool: getUserRepositories

Agents in Jira

Generally Available

Studio

Build Rovo Agents through natural language

The screenshot displays the Atlassian Studio interface. On the left is a navigation sidebar for the organization 'Vitafleet' (priyahansra@vitafleet.com). The sidebar includes options like Home, Vitafleet Hub, Jira, Confluence, Loom, Focus, Goals, Teams, Chat, Search, Studio, Analytics, and Administration. The 'Studio' option is highlighted with a green callout bubble containing the name 'Raul'. The main content area shows a user profile for 'Morning Paul Gonzalez' with a 'Play of the day - Roles & Responsibilities' badge. Below the profile are several cards for 'Container name' (Project and Space) and 'Meeting notes 21-03-24'. A feed of items is visible at the bottom, including a Jira bug report 'Investigate crashes from iOS build 3.04.4 that is causing our LLM...', a goal 'Launch Vitafleet go to market campaign', another Jira bug 'Button not working', a project creation task 'Build a work feed', and a team creation task.

ANNOUNCING

Teamwork Graph

CLI

Open Beta

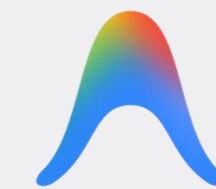

```

    use TWG to prep me for the next week of work
  
```

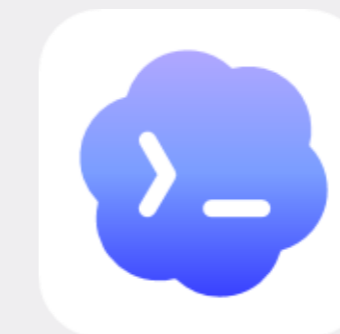

- Let me load the TWG skill first, then grab your calendar for next week.
 - > Load TWG skill for cross-app work context
 - > Get all calendar events for next week
- I've got your full calendar for next week. This is a big week - it's the final push before the new website goes live! Let me pull context for the key work meetings using TWG to make sure I prep you well.
 - > Get recent meeting recordings for context
 - > Get Project Fairydust meeting page for context
 - > Get the website execution plan for Project Fairydust planning prep
- Let me grab the execution plan and the agenda page
 - > Get the Fairydust Pre-Release Executionm Plan for the website
 - > Get the Vibe Council meeting notes page
 - > Parse the meetings output

Live Demo

TWG CONTEXT SIDE BY SIDE

INSIGHT

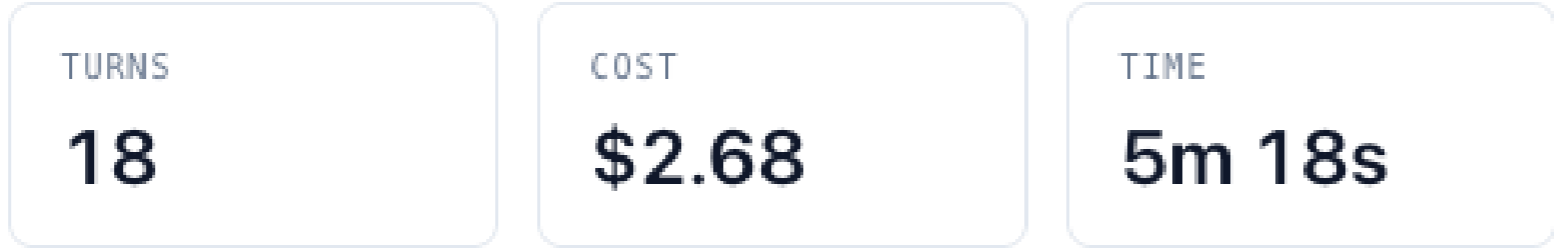

Key context lives in ERP-133 and a Confluence spec

ERP-133 introduced the query-pricing button. The PDF spec at [redacted] defines the filter rule. Without TWG, the agent grep-walks the ERP repo and only catches one of the two call sites.

Claude Code Default
